EDUCATION

Ph.D. in Economics, University of California, Davis	2024
M.S. in Economics, University of Wisconsin, Madison	2018
M.A. in Economics, Sung Kyun Kwan University (Korea)	2012 (<i>coursework complete</i>)
B.A. in Law, Sung Kyun Kwan University (Korea)	2010

RESEARCH INTERESTS

Applied Microeconomics, Labor Economics, Innovation, Immigration

RESEARCH EXPERIENCE

SSK Inclusive Economic Policy Research Team Postdoc	2024 ~ Present
Korea Institute of Public Finance Center for Performance Evaluation and Management <i>Research Associate</i>	2014 ~ 2015
Korea Development Institute Department of Human Resource Development Policy <i>Research Associate</i>	2012 ~ 2014

WORKING PAPERS

Automation, Human Task Innovation, and Labor Share: Unveiling the Role of Elasticity of Substitution (with Seungjin Baek)

Abstract: This paper investigates the elements contributing to the decline in labor share, with a specific focus on the roles of 'automation' and 'innovation in human tasks.' We construct a general equilibrium model that separately incorporates both robot and non-robot capital to derive an econometric specification. Based on our regression results, we estimate the elasticity of substitution

between labor and non-robot capital to be less than one. Conversely, the elasticity of substitution between tasks is estimated to be one. Together with these estimates, our regression results yield three major findings. First, we identify two distinct channels through which robots affect labor share: automation and the decrease in the price of robots. Both channels are found to negatively impact labor share. Our general equilibrium model predicts that the effect of declining robot prices will intensify as robots become more prevalent. Second, we are the first to empirically evaluate the impact of human task innovation on labor share by constructing a novel index for new human tasks. Our accounting analysis suggests that the positive influence of human task innovation outweighs the adverse effects of automation. Lastly, by utilizing estimates of the elasticity of substitution between labor and non-robot capital, as well as between tasks, we elucidate the mechanisms through which factor prices affect the labor share. Specifically, we find that both the negative effect of automation and the positive effect of human task innovation are amplified through the aggregated task price channel.

How the Reduction of Temporary Foreign Workers Led to a Rise in Vacancy Rates in South Korea

Abstract: This paper investigates the impact of a reduction in low-skilled Temporary Foreign Workers (TFWs) on job vacancies in South Korea's manufacturing sectors. The study harnesses a quasi-experimental event—the commencement of a COVID-19 quarantine policy in January 2020—as the foundation to pinpoint the causal link between the dwindling numbers of TFWs and the subsequent increase in job vacancies. This stringent quarantine measure acted as the 'shift' component in my shift-share instrument, while the pre-pandemic distribution of TFWs across various manufacturing sectors functioned as the 'share' component. Utilizing Difference-in-Difference regressions with continuous intensities, the research underscores that sectors with a heavy dependence on TFWs witnessed a significant spike in vacancies a year following the COVID-19 outbreak, and this surge lasted for two years. Consequently, firms grappled with the challenge of securing full-time staff, given that most of these foreign workers (E9 visa holders) had been primarily engaged in full-time roles. This highlights that domestic workers are not readily available to fill vacant positions, especially as full-time workers. The paper also incorporates the Local Projection methodologies to substantiate these observations.

WORK IN PROGRESS

Market Concentration and Labor Share: An EU Critique of the Superstar Firms Theory

Abstract: This paper contends that the Superstar Firms theory by Autor et al. (2020) inadequately explains the decline in labor share in EU countries. Although market concentration has risen in the U.S., it has notably decreased overall in EU nations. We first demonstrate the weak correlation between market concentration and changes in labor share in the EU using CompNet data. We then delve deeper with firm-level data from Orbis. Finally, we offer compelling reasons that are unique to the EU context. We conclude that while the Superstar Firms theory is a robust explanation for the U.S., it cannot be universally applied.

PRESENTATIONS (*: Scheduled)

SSK Networking 4th Joint Symposium*	2024
Western Economic Association International 99th Annual Conference*	2024
American Economic Association Annual Meeting (Korea-America Economic Association session)	2024
Korea-America Economic Association Job Market Conference	2023
Applied Microeconomics Student Talk, UC Davis	2022, 2023
Annual All-California Labor Economics Conference (poster)	2023
Advisees' Meeting Presentations, UC Davis	2021, 2022, 2023

TEACHING EXPERIENCE

UC DAVIS, Teaching Assistant	2018 ~ 2024
ECN 1A Introductory Microeconomics	
ECN 1B Introductory Macroeconomics	
ECN 100A Intermediate Microeconomics	
ECN 101B Intermediate Macroeconomics	
ECN 110B World Economic History	
ECN 131 Public Finance	

FELLOWSHIPS

Research Award, UC Davis, Department of Economics	2023
Non-Resident Tuition Fellowship, UC Davis	2019 ~ 2022
SimSan Scholarship, SimSan Foundation	2010 ~ 2012
Scholarship for Academic Excellence, Sung Kyun Kwan University	2009

SKILLS

Stata, SAS, R, MATLAB, Python
English (fluent), Korean (native), Japanese (advanced)
